With what sounds like multiple sets of boots stampeding your way, you dash for the door. Your group is less than halfway across the lab before 128 stops short. “Hey, what about our gear? They have to have stored it somewhere around here.”

Fiorella nods. “Affirmative. And shouldn’t we take the blaster rifles or armor from the two soldiers?”

“I suppose some very quick corpse looting might improve our chances.”

“Forget your belongings! They can be replaced! That’s what credit cards are for!”

“You’re right! How can I live without my precious stuff?”

I take a moment to see what everyone thinks is the best course of action.

If you buy only one expansion for IL2 -- this is my recommendation. (At least until Bodenplatte)

It has a good and varied aircraft selection, and the map is a big step up from the relatively drab sea of fields you get in Moscow/Stalingrad. Lots of height in the mountains, and the ocean looks great. (if you don't get blown to bits by a destroyer 30 seconds in.) Lots of big well detailed urban areas as well, so there's a lot of variety with this map.

The only complaint I'd give it is I have consistent issues flying the P-39 -- it's throttle consistently drops to 0 every 1-2 seconds. This happens to no other planes, so I don't know what to make of it. Might just be me.. Wonderful, innovative, and fun. This is a great go-to LAN game, and the DLC was really entertaining. How many games have an easter egg involving shooting santa out of the sky? This one. 9/10.. Linux version: this is so buggy! Several graphics bugs, broken menu, missing subtitles, missing videos, ridiculous movement, and no idea how to proceed. Don't waste even the small amount of money.. TL;DR

Great platform, amazing debugging, and offers a lot of baked-in value, especially at the price. There are other platforms just as capable with similar offerings, but from personal perspective, I liked what little bit I tested out. Unfortunately latent discoveries compelled me to uninstall because the overall package didn't fit my personal need. It would however, fit the need of many with more experience and V or fewer requirements.

I liked what I used within it, and it definitely met some of the needs through addressing many wants but I was unaware that WINGS IDE 6 was released on 12/20 which packs in several modernized features to include directly working within Raspberry Pi as well as other feature-rich items....IF you buy the \$245 professional edition. However, there is now a free edition that is just an updated version of IDE 5 and the developers moved away from Personal V Commercial to Personal V Professional.

I don't fully understand this model and offering Pi as a 'professional' feature given most users of Pi don't create a full blown product for sale. Though they may, it doesn't encourage use and learning to use IDE for the growing popularity of Pi based systems.. funny and for free :D. Sarah u traitor. This is a visual novel about a solitary teenager who has problems dealing with people and social responsibilities (basically, he's discovering the horrors that come when you grow up). The story is simple, and the game is short (actually, it feels like all goes very fast -the protagonist's mindset changes too fast, although this can be understood remembering that he's a teenager-). The music is New Age-like (think of Vangelis's music), involving you with a nostalgic feeling. The story could be better, but it is fine like it is (the player can catch the message it wants to convey). And more important, it is free. So, if you have 60-70 minutes of free time, don't doubt and play this game.. So, let's start off with the good bits;

The menu music (Avenged Sevenfold/Skillet or similar style of band)

The graphics are good enough for this type of game.

The handling - as far as turning and such, purely as a game mechanic, not as how it works in the game as a whole - isn't bad.

Now for the reasons I gave it a thumbs down;

(this first one is nitpicking and not really relevant, but with the music that good I do want to mention it) - No volume control.

(this one's also quite a bit biased but more valid than the above) - You can't change camera, you're stuck with the 3rd person variant they put in, even people that prefer 3rd person (which I don't) probably want the ability to set near/far and you can't even do that.

The placement of the Race standings on the left side of the screen, it makes it quite hard to know what the upcoming left turn looks like, especially as there's no mini-map showing the track.

No E-brake in a game that screams for it, this is arcade racing in the vein of Dirt 4 (or Forza Horizon 3) buggy racing and you didn't add an E-brake? (the handling - though fairly good - isn't good enough for you to ride the racing line and it's absolutely not the kind of game within which you'd want to do that, this screams out "Let's go sideways and laugh!" and doesn't let you do one or the other)

TBH I don't know who this game in its current version is aimed at, it's certainly not the Forza Horizon/Dirt 4 me, it's not the (a slew of) NFS me, it's not the Flatout me, it's not the Rally Trophy/Colin McRae rally me, it's not the (even though it happens very rarely, I do know how they work and what makes them good) Cart racer me.... My favorite nutjob. She has her own lines, to boot. Would recommend even at full price.

This is NOT a farming game. It is, in fact, a factory game, the use of farm products as widgets notwithstanding.

If that's fine with you, then great. Personally I want a FARMING game - without the "social" junk imposed by Farmville.

There is no continuity in this game whatsoever. You are not building a farm, you are not planting crops, you are not able to choose for yourself which farm buildings you want or where they will be placed.

It's a series of hoops you have to jump through with a set goal, imposed by the game, and totally linear. The only thing that is valued is how fast you can do things. They place the buildings at random so at each new "level", none of which last more than a few minutes, you are starting over with some random initial conditions. Within each level, the initial settings will be the same, but from one level to the next, you are starting with different buildings placed in varying and seemingly random locations, and with a variable number of farm animals and varying amounts of startup cash.

You are never building on what's gone before. Doesn't matter if you bought a sausage factory in the last 28 levels, you'll have to buy it again the next level.

There is zero replay value. Once you've hit the end, you've hit the end - and each new "challenge" is the same as the last. Do things FAST and count on starting from scratch at the next level.

I wish somebody out there would make an actual farming game that does not rely on - or even PERMIT - access to social media.

If you're looking for an actual farming game, this is NOT it.

Also there are a ton of small but very annoying bugs in the game. Firstly, in order to get it to run at all, I had to go and disable Tablet PC Input Service, even though it was set for Manual only startup. I have no idea why; I have never started that service ever, as I would have to specifically do when a service is set for Manual. But nothing would satisfy the stupid game except that it be actually disabled. That's just bad programming on the game developer's part.

Then, everytime it starts up, it is screwing up the configuration check and tells me that my PC "does not meet the minimum requirement" - when in fact it exceeds them. I can run Dragon Age and The Elder Scrolls Oblivion on here - heck, I can run all of the Witcher series on this but The Witcher 3, which is the most advanced game I own and needs way more graphics power than I have on this system. But apparently not Farm Frenzy 4, even though this machine exceeds the listed system requirements.

Then, it will lock up once in a while for no apparent reason. If you have too many animals, you have to watch how much grass you put out - because if you put down too much grass, the pigs will go to sleep as if there were no grass at all out. The music on startup will sound like a stuck record, playing the same 2 or 3 notes over and over and over again while its loading the startup screen.

And the English translations are among the worst I've ever been forced to deal with. You would think they could find one person in Japan or wherever this game comes from who can actually speak English to do their translations, or at least check the translations. It's not QUITE of "all your base are belong to us" quality, but its close.

If you would be happy with a game called "Factory Frenzy" then this game may be for you.

But if you want an actual farming game, this isn't it.. Quite frankly, this was one of the best vr experiences I've had to date.

Excellent visuals, interesting bits of info, and a great teleport system.

The funniest part is that, to me the most impressive thing was the helmet visuals and physics.

*Edited for grammar.. Bought this game for my son, and he's so happy with it! Can't stop playing Deiland. And he's so fast - now he grows some plans, then he goes fishing, the next moment he fights someone. And he built a big house from a tiny hut. So proud of my boy!) says there's a beautiful girls that comes and give different tasks. I see how satisfied my son with this game, he needed a few minutes to master it and now he plays and plays it. So I only can say this game is excellent and I

recommend it to all parents around.. A really nice art book containing a lot of detailed illustrations.
(Yes, that's the whole review). The game is badly translated and has several bugs. I've heard that fullscreen mode doesn't work, and faces seem to almost vanish at times.

Even given this, this game is still highly enjoyable. The game is still understandable, if a bit disjointed. The artwork is good, the stat system is as well. If you enjoyed PM2 (which also had a terrible translation) I would see no reason to not enjoy this.

The lack of an adventure mode is sad though.... <http://youtu.be/E2pGS0w2za8>
[I played until the 10th level of Triblaster.](#)

[The 3D graphics are very simple. But this is a retro game, so that's how it's supposed to be. The distortion transition effect and backgrounds look cool. The game is presented pretty well for what it is.](#)

[You control a triangle. You use the mouse to roll it around and shoot enemy objects. You can shoot a big beam which is cool.](#)

[Controlling your triangle can be difficult with the mouse. I found that it over rolled or just didn't move when I thought I'd moved the mouse enough to put it where I want. I think the terrain is supposed to affect your movement as well which didn't help. You don't seem to be able to use the keyboard which kind of doesn't make sense to me considering that it's a retro game. I forgot that I could avoid hostile objects by jumping over them using space bar so I didn't make it that far.](#)

[It's an arcade game and so far it seems to be a competent one at that. It would be nice if they fixed up the controls a bit. It is \\$3.99 on steam which I would say is probably not too bad a price.](#)

[Click here for more let's play videos =>\). Honestly not one of the better games that Artifex Mundi have put out. It takes a lot of the classic Artifex Mundi puzzles and techniques and uses them so sloppily that you really have to wonder if they put any thought into it at all, or just tossed them in there because, hey, that's what these games do, right? The whole game is a mess. It's playable, and that's really the only praise I can give it.. the game is glitched and you cant actually play it on pc](#)

[you can play it on xbox and ps4 and stuff but not on pc](#)

[a waste of money. This was so much fun! The main game was adorable yet scary. The dark theme's and overall scary atmosphere made it much more fun to play through unlike some other games I have played. I would definitely recommend this to anyone looking for a good indie horror game!](#)
